

Safety

- ◆ **What are some of the safety improvements included in the project?**
 - ◆ Widening the road will provide additional capacity that will help alleviate bottlenecks and traffic back up that cause unsafe conditions
 - ◆ Left turn lanes will stay in the center of the roadway, and the roadway widened to allow the through-lanes to remain straight from one end of the corridor to the other
 - ◆ Straighter roadways are generally easier to drive because drivers are maintaining control since they are not dealing with jogs in the roadway that currently exist
 - ◆ Wider shoulders will increase the distance between the edge of the new roadway and the ground sloping up/down toward adjacent properties. This area will be maintained at a constant flatter slope through the entire corridor
 - ◆ See "Clear Zone" handout at this station for more information

ARAPAHOE - Waco to Himalaya Safety Improvements

- Wider Road
- Left Turn Lanes in the Center
- Straighter Road
- Extra Wide Shoulder Area

WORK IN PROGRESS
