

REPLACEMENT WINDOWS

Change in Policy

City of Centennial Building Department

New Policy states:

“Installation of any replacement egress window requires a Building Permit and must be done without reducing the rough opening of the window. Any proposal to enlarge the rough opening or change the style, operating method, or ventilation of a replacement egress window must be reviewed on a case-by-case basis by the Building Official. Replacement windows must meet code requirements for safety glazing and natural light.”

When applying for a permit for replacement windows, please state the sizes of the original windows on the application on a separate sheet of paper (provide two copies), labeled with the job site address, contractors name and date the application is submitted.

I have read and understand the above policy:
